

Learning Python

By Local Compiler

Table of Contents

Chapter 1: Getting Started

1.1 Installation

1.2 Hello World

Chapter 2: Variables

2.1 Data Types

2.2 Operators

Chapter 1 Getting Started

1.1 Installation

To install Python, download the installer from python.org and run it.

1.2 Hello World

You can run your first program using `print('Hello World')` in your editor.

Chapter 2 Variables

2.1 Data Types

Python has several built-in data types such as integers, floats, and strings.

2.2 Operators

Python supports arithmetic operators like addition, subtraction, multiplication, and division.
